

AMENDMENTS TO SPECIFICATION

Please cancel original paragraphs [0070], [0071] and [0074] in the specification, and substitute the following amended paragraphs:

[0070] The term “computer-readable medium” as used herein refers to any storage medium that participates in providing instructions to processor 144 for execution. Such a medium may take many forms, including, but not limited to, non-volatile media, and volatile media, ~~and transmission media~~. Non-volatile media includes, for example, optical or magnetic disks, such as storage device 150. Volatile media includes dynamic memory, such as main memory 146. ~~Transmission media includes coaxial cables, copper wire and fiber optics, including the wires that comprise bus 142. Transmission media can also take the form of acoustic or light waves, such as those generated during radio wave and infrared data communications.~~

[0071] Common forms of computer-readable media include, for example, a floppy disk, a flexible disk, hard disk, magnetic tape, or any other magnetic medium, a CD-ROM, any other optical medium, punch cards, paper tape, any other physical medium with patterns of holes, a RAM, a PROM, and EPROM, a FLASH-EPROM, any other memory chip or cartridge, ~~a carrier wave as described hereinafter~~, or any other medium from which a computer can read.

[0074] The network link typically provides data communication through one or more networks to other data devices. For example, the network link may provide a connection through a local network to a host computer or to data equipment operated by an Internet Service Provider (ISP). The ISP in turn provides data communication services through the worldwide packet data communication network now commonly referred to as the “Internet”. ~~The local network and the Internet both use electrical, electromagnetic or optical signals that carry digital data streams. The signals through the various networks and the signals on the network link and through the interface 159, which carry the digital data to and from computer system 140, are exemplary forms of carrier waves transporting the information.~~
